

FORTUN3

The future isn't random
it's encrypted, decentralized, and revealed through the eyes of AI.

What if the blockchain
could tell **your future**?

Fortun3

A decentralized, AI-powered horoscope engine that turns your blockchain data into prophecy.

Consult the digital prophet about your destiny using various sources of destiny. Each consultation can be minted a unique Destiny NFT stored on IPFS

Core Features

Multi-Source Destiny Reading

Choose a destiny source: wallet address, transaction hash, or timestamp. Each input guides a unique and personal prophecy.

AI-Powered Horoscope

The Prophet AI analyzes blockchain data and user input to generate symbolic, poetic, and personalized readings.

Smart Contract Integration

Smart contracts handle payments, ticket validation, and NFT minting—ensuring a secure and trustless experience.

Destiny NFTs

Each prophecy is minted as an NFT with metadata and stored on IPFS, giving users ownership of their digital fortune.

Dual Interface Support

Accessible through both a web frontend and MCP clients, users can consult the Prophet wherever they are.

Token Exchange

Users can swap USDC for F3 tokens at a 1:1 rate to access consultations. Payments are secured by smart contracts for full transparency.

Source of destiny

At Fortun3, users can choose from multiple unique data points as their "source of destiny" — these inputs fuel the AI to generate hyper-personalized prophecies.

✨ Choose Your Path. Every source holds a story.

Wallet Address

Your on-chain identity

AI analyzes activity patterns, wallet age, transaction history, and interactions to reveal hidden messages about your digital self.

Tx Hash

A moment sealed in time

Every transaction has context — what it meant, when it happened, and how it connects to your journey. The Prophet decodes these clues.

TimeStamp

Cosmic timing, on-chain aligned

Whether it's your birthday, an anniversary, or a random moment — time-based readings are powered by temporal blockchain data and AI interpretation.

And more

We're constantly expanding the horizon of destiny. Look out for new sources like: NFT ownership, DAO participation, Token balance patterns, Even zk-proofs,

MCP Server Integration

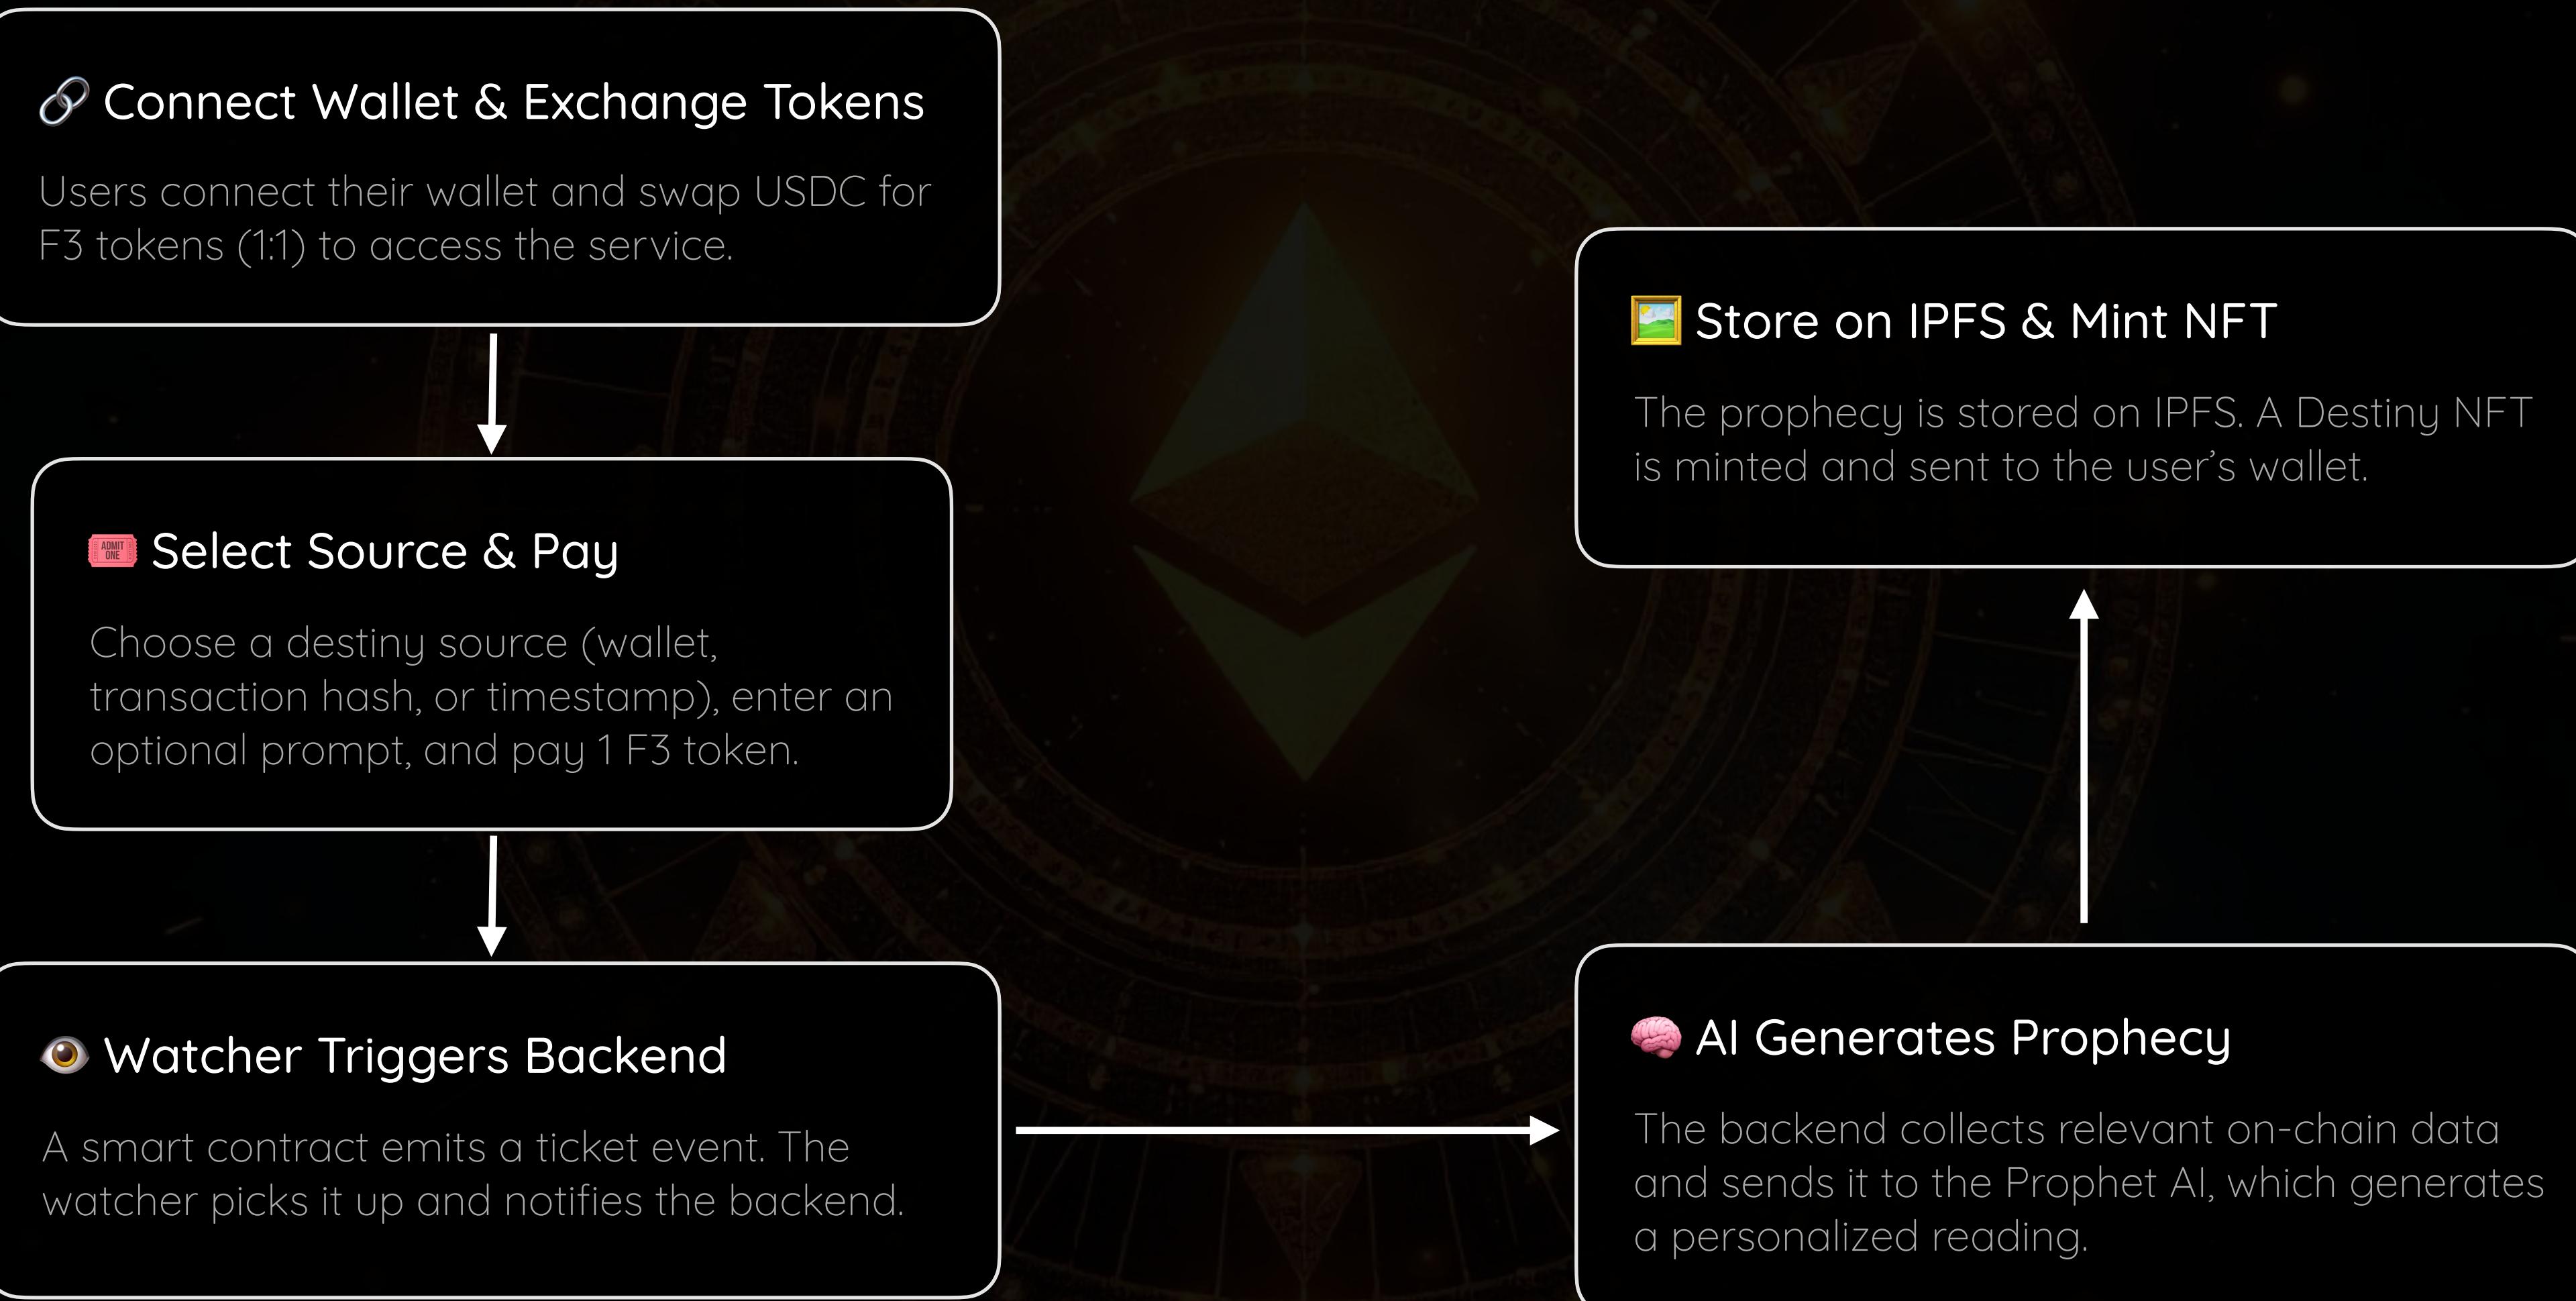

Extending Fortun3 beyond the browser – AI-powered consultations, anywhere.

The MCP (Multi-Channel Prompt) Server acts as a bridge between Fortun3's backend and external AI clients like ChatGPT, Claude, or other LLM-based interfaces. It allows users to interact with Fortun3 using conversational agents outside the Web3 UI.

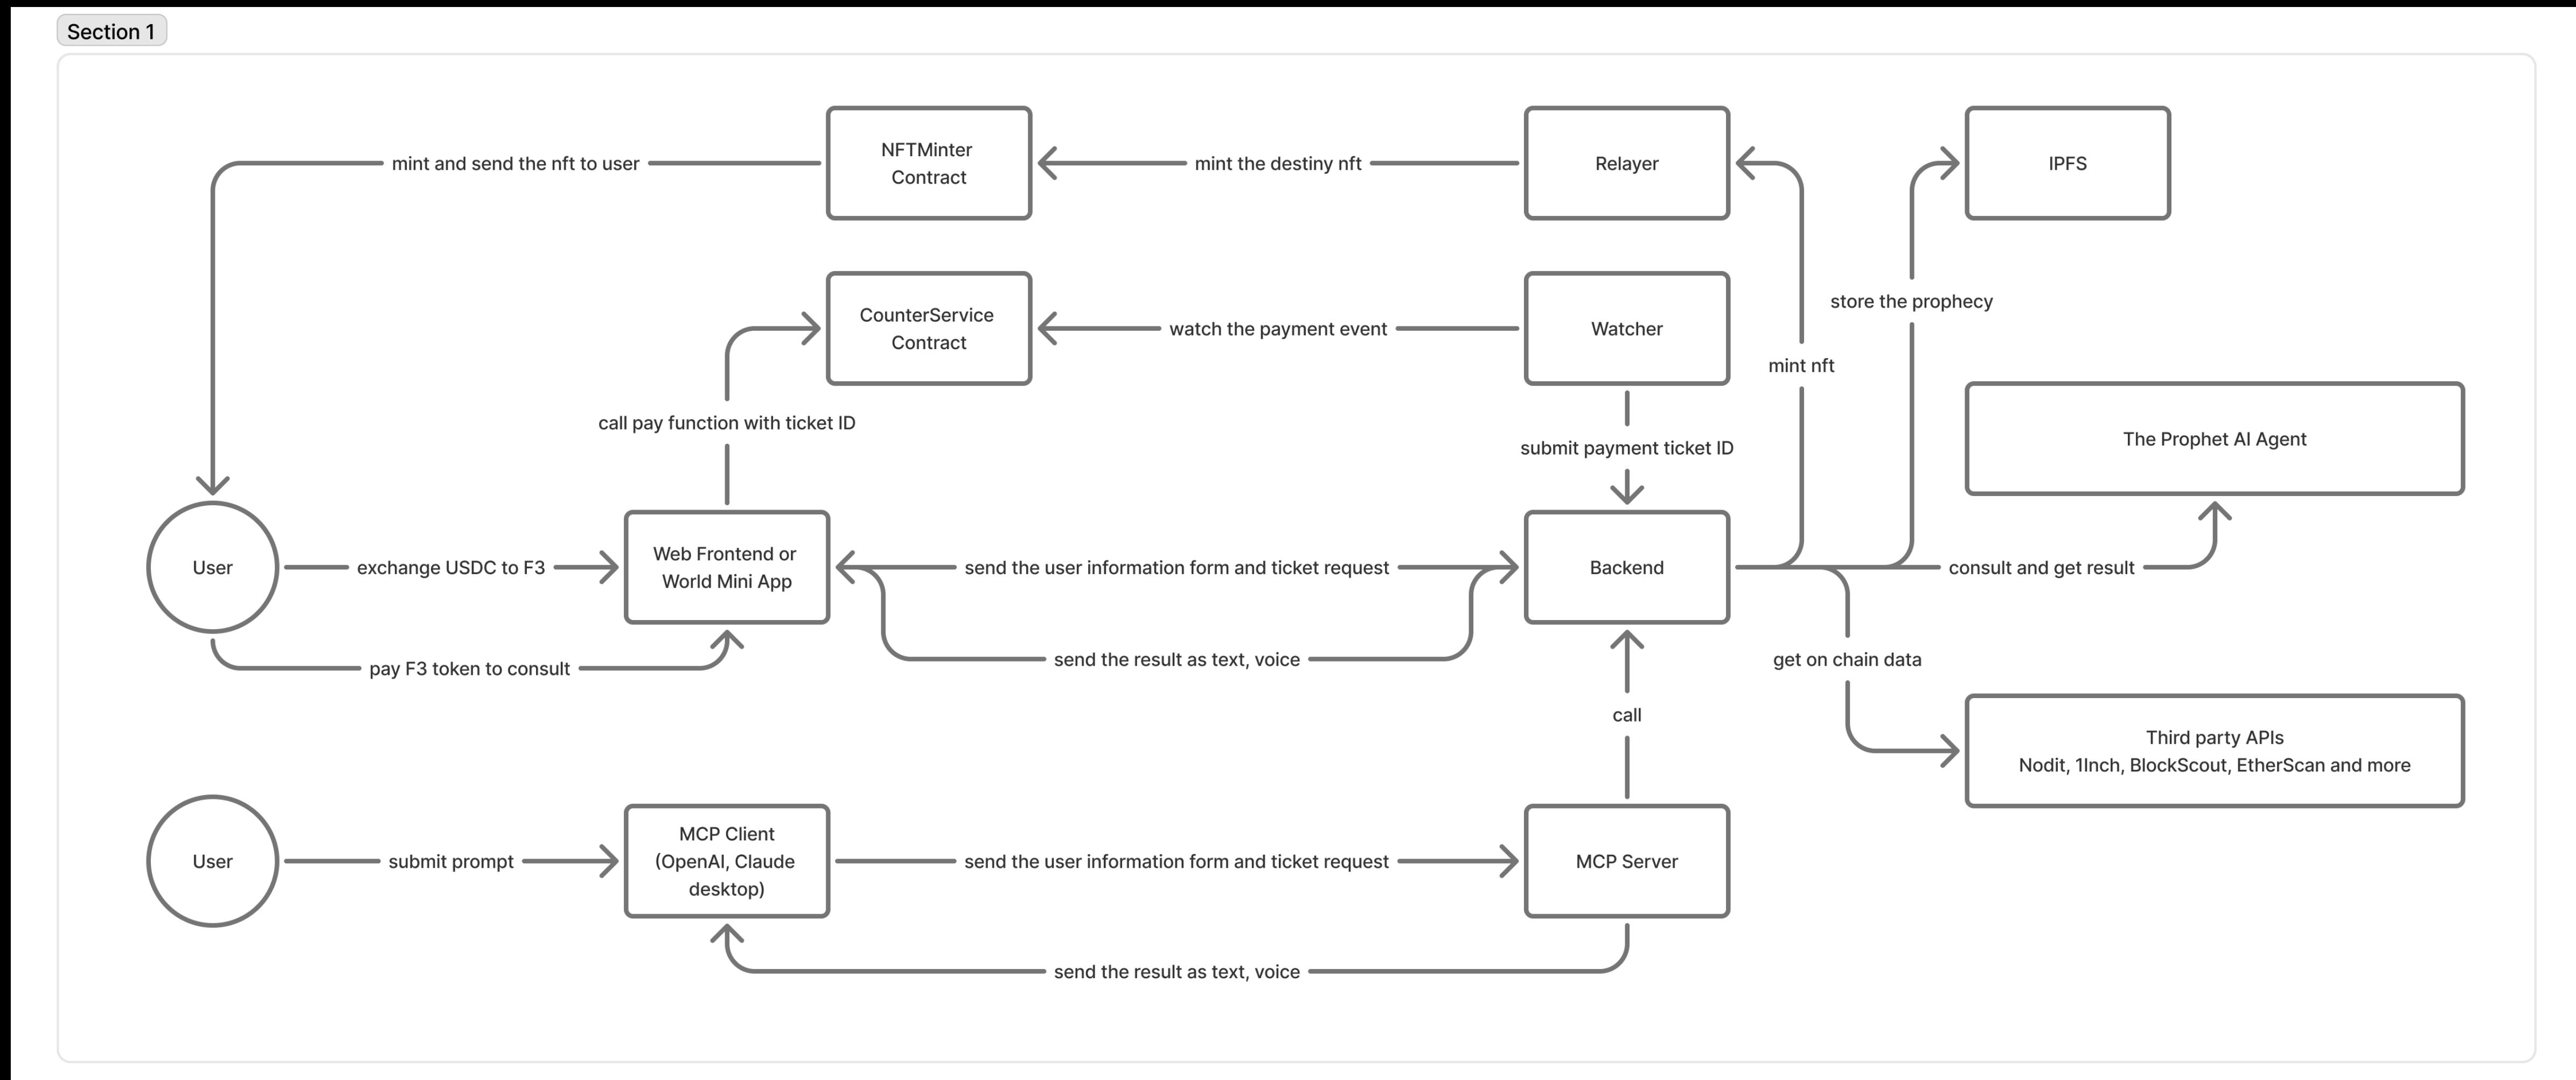

User submits a prompt via an AI interface
(e.g., ChatGPT with plugin access or custom UI).

How it works

Fortun3 transforms blockchain data into personalized prophecies using a seamless flow between smart contracts, AI, decentralized storage, and a smooth user interface.

Architecture

World Integration

Fortun3 is built to work natively inside the World ecosystem – verified, affordable, and mobile-first.

World ID (Verify)

We use World ID to ensure each user is uniquely verified, enabling fair access to consultations and preventing bots.

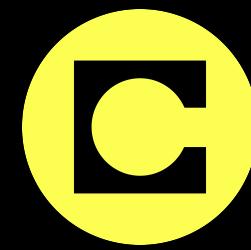

Pay on World Chain using MiniKit SDK

Fortun3 smart contracts are deployed on World Chain, offering low-cost and fast transactions using USDC.

World MiniApp

We built a MiniApp using MiniKit so users can access Fortun3 directly inside the World App – no browser or wallet switching needed.

Celo Integration

Fortun3 brings decentralized destiny to the mobile-first world of Celo — empowering more users with seamless, inclusive access to AI-powered horoscopes.

Deployed to Celo Blockchain

Fortun3 contracts are live on the Celo mainnet, taking advantage of its fast, low-cost, and mobile-optimized infrastructure.

USDC on Celo

Users can pay for consultations using USDC on Celo, enabling gas-efficient transactions and easy onboarding for mobile wallets.

Nodit Integration

Fortun3 get the real-time blockchain insights, made seamless with Nodit.

On-chain Data Fetching

Elastic node, Web3 data API (NFT meta data multi-chain fetching), Web hook payment confirmation

Faster & Reliable Indexing

Nodit provides reliable and real-time access to blockchain events without the need to build our own indexer — saving us time and infrastructure costs.

Powering the Prophet

The Prophet AI Agent uses data fetched via Nodit to add symbolic meaning to on-chain behavior, ensuring every prophecy is grounded in actual blockchain history.
